

TeTraLine Co.

*Exactly compatible with your Budget
"it's finger LICKIN good!"*

Gas Chromatography system (GC)

- Five types of detectors for free selection
- Unit component and integrated structure design, easy for installation and maintenance.
- large volume column oven, three columns can be installed simultaneously.
- Reasonable design, three detectors can be installed simultaneously, three independent electro circuit systems and three signal output fan-outs are available
- Stable temperature control system; 8 ramp programmable warming; the sample injector and every detector may control the temperature independently and has over temperature protection function.
- Flexible packed column and capillary column system.
- Fire new voltage stabilization system and multi-gas system, single, double and three gas path for free selection
- Injector and valve sample injection system for free selection
- Reversible flow and pre-incision device for free selection
-

Mass spectrometry system (GC/MS)
